# Object-Oriented Interface Erosion Audit

Repository: **guava** • URL: https://github.com/google/guava • Generated: 2026-10-26 06:59 UTC

## 1. Executive Summary & Project Erosion Index

| | | | |
|---|---|---|---|
| **Project Erosion Index** | **87.8 / 100** | **Status:** | **Healthy** |
| **Analyzed Commits:** | 6 | **Tracked Interfaces:** | 4972 |
| **ISP Violations:** | 578 | **Dependency Cycles:** | 8 |

## 2. Interface Inventory & CK Metrics

CK metrics (CBO, LCOM, RFC, WMC, DIT) are aggregated across implementing classes. NOC represents the number of concrete implementing classes.

| Interface | Pkg | Health | Severity | Methods | CBO | LCOM | WMC | NOC |
|---|---|---|---|---|---|---|---|---|
| **FinalizableReference** | com.google.c | 100.0 | HEALTHY | 0 | 0.0 | 0.00 | 0.0 | 0 |

## 3. Interface Segregation Principle (ISP) Violations

| Rule / Indicator | Class | Method | Evidence |
|---|---|---|---|
| **Exception-Throwing Stub** | `ThrowingSupplier` | `get` | Throws new NullPointerException() instead of providing required contract behavior. |
| **Exception-Throwing Stub** | `ThrowingSupplier` | `get` | Throws new NullPointerException() instead of providing required contract behavior. |
| **Exception-Throwing Stub** | `AbstractCache` | `get` | Throws new UnsupportedOperationException() instead of providing required contract behavior. |
| **Exception-Throwing Stub** | `AbstractCache` | `put` | Throws new UnsupportedOperationException() instead of providing required contract behavior. |
| **Empty Implementation Method** | `AbstractCache` | `cleanUp` | Method body is completely empty, suggesting the class was forced to implement an unused method. |
| **Exception-Throwing Stub** | `AbstractCache` | `size` | Throws new UnsupportedOperationException() instead of providing required contract behavior. |
| **Exception-Throwing Stub** | `AbstractCache` | `invalidate` | Throws new UnsupportedOperationException() instead of providing required contract behavior. |
| **Exception-Throwing Stub** | `AbstractCache` | `invalidateAll` | Throws new UnsupportedOperationException() instead of providing required contract behavior. |
| **Exception-Throwing Stub** | `AbstractCache` | `stats` | Throws new UnsupportedOperationException() instead of providing required contract behavior. |
| **Exception-Throwing Stub** | `AbstractCache` | `asMap` | Throws new UnsupportedOperationException() instead of providing required contract behavior. |
| **Exception-Throwing Stub** | `AbstractCache` | `get` | Throws new UnsupportedOperationException() instead of providing required contract behavior. |
| **Exception-Throwing Stub** | `AbstractCache` | `put` | Throws new UnsupportedOperationException() instead of providing required contract behavior. |
| **Empty Implementation Method** | `AbstractCache` | `cleanUp` | Method body is completely empty, suggesting the class was forced to implement an unused method. |
| **Exception-Throwing Stub** | `AbstractCache` | `size` | Throws new UnsupportedOperationException() instead of providing required contract behavior. |

| | | | |
|---|---|---|---|
| **Exception-Throwing Stub** | `AbstractCache` | `invalidate` | Throws new UnsupportedOperationException() instead of providing required contract behavior. |

## 4. Design Smells & Dependency Cycles

| Category | Rule Name | Severity | Target | Details |
|---|---|---|---|---|
| Code Smell | **Long Method** | WARNING | `SystemLoader` | Method 'loadFinalizer' spans 27 lines in 'SystemLoader'. |
| Code Smell | **Feature Envy** | WARNING | `SystemLoader` | Method 'loadFinalizer' in 'SystemLoader' delegates heavily to external methods: isAndroid, getSystemClassLoader, info. |
| Code Smell | **Feature Envy** | WARNING | `DecoupledLoader` | Method 'loadFinalizer' in 'DecoupledLoader' delegates heavily to external methods: isAndroid, newLoader, getBaseUrl. |
| Code Smell | **Feature Envy** | WARNING | `DecoupledLoader` | Method 'getBaseUrl' in 'DecoupledLoader' delegates heavily to external methods: replace, getResource, getClassLoader. |
| Code Smell | **Long Method** | WARNING | `SystemLoader` | Method 'loadFinalizer' spans 27 lines in 'SystemLoader'. |
| Code Smell | **Feature Envy** | WARNING | `SystemLoader` | Method 'loadFinalizer' in 'SystemLoader' delegates heavily to external methods: isAndroid, getSystemClassLoader, info. |
| Code Smell | **Feature Envy** | WARNING | `DecoupledLoader` | Method 'loadFinalizer' in 'DecoupledLoader' delegates heavily to external methods: isAndroid, newLoader, getBaseUrl. |
| Code Smell | **Feature Envy** | WARNING | `DecoupledLoader` | Method 'getBaseUrl' in 'DecoupledLoader' delegates heavily to external methods: replace, getResource, getClassLoader. |
| Code Smell | **Large Class** | WARNING | `Converter` | Implementing class 'Converter' declares 15 methods. |
| Code Smell | **Feature Envy** | WARNING | `Converter` | Method 'convertAll' in 'Converter' delegates heavily to external methods: checkNotNull, iterator, hasNext. |
| Code Smell | **Feature Envy** | WARNING | `FunctionForMapNoDefault` | Method 'apply' in 'FunctionForMapNoDefault' delegates heavily to external methods: get, checkArgument, containsKey. |

| | | | | |
|---|---|---|---|---|
| Code Smell | **Feature Envy** | WARNING | `ExpensiveComputation` | Method 'apply' in 'ExpensiveComputation' delegates heavily to external methods: valueOf, add, multiply. |
| Code Smell | **Large Class** | WARNING | `Converter` | Implementing class 'Converter' declares 15 methods. |
| Code Smell | **Feature Envy** | WARNING | `Converter` | Method 'convertAll' in 'Converter' delegates heavily to external methods: checkNotNull, iterator, hasNext. |
| Code Smell | **Feature Envy** | WARNING | `FunctionForMapNoDefault` | Method 'apply' in 'FunctionForMapNoDefault' delegates heavily to external methods: get, checkArgument, containsKey. |
| Cycle | **Circular Dependency** | CRITICAL | `Cycle` | Cycle path: FinalizablePhantomReference -> FinalizableReference -> FinalizablePhantomReference |
| Cycle | **Circular Dependency** | CRITICAL | `Cycle` | Cycle path: Strategy -> Splitter -> Strategy |
| Cycle | **Circular Dependency** | CRITICAL | `Cycle` | Cycle path: Service -> Listener -> Service |
| Cycle | **Circular Dependency** | CRITICAL | `Cycle` | Cycle path: FinalizablePhantomReference -> FinalizableReference -> FinalizablePhantomReference |
| Cycle | **Circular Dependency** | CRITICAL | `Cycle` | Cycle path: Strategy -> Splitter -> Strategy |

## 5. Historical Evolution & Statistical Change Points

*No abrupt statistical change points detected in the analyzed commit window.*

## 6. AI-Assisted Architecture & Refactoring Recommendations

### Diagnosis (deterministic_expert_engine):

Interface 'ReferenceEntry' exhibits design erosion symptoms. Implementing classes are forced to provide 578 empty stubs or UnsupportedOperationException stubs, directly violating the Interface Segregation Principle. The interface has grown to 17 methods, accumulating unrelated operational concerns.

### Refactoring Plan & Responsibility Separation:

Apply the 'Extract Interface' refactoring pattern: - Split 'ReferenceEntry' into focused role-based interfaces with <= 3 methods each. - Have implementing classes implement only the specific interfaces they actually fulfill.

**Risks & Trade-offs:** Refactoring interface contracts introduces temporary breaking changes for external callers. Deprecate bloated methods first, provide default adaptor implementations, and migrate client call sites incrementally.

### Diagnosis (deterministic_expert_engine):

Interface 'ReferenceEntry' exhibits design erosion symptoms. Implementing classes are forced to provide 578 empty stubs or UnsupportedOperationException stubs, directly violating the Interface Segregation Principle. The interface has grown to 17 methods, accumulating unrelated operational concerns.

### Refactoring Plan & Responsibility Separation:

**Risks & Trade-offs:** Refactoring interface contracts introduces temporary breaking changes for external callers. Deprecate bloated methods first, provide default adaptor implementations, and migrate client call sites incrementally.

### Diagnosis (deterministic_expert_engine):

Interface 'Cache' exhibits design erosion symptoms. Implementing classes are forced to provide 578 empty stubs or UnsupportedOperationException stubs, directly violating the Interface Segregation Principle. The interface has grown to 12 methods, accumulating unrelated operational concerns.

### Refactoring Plan & Responsibility Separation:

Apply the 'Extract Interface' refactoring pattern: - Split 'Cache' into focused role-based interfaces with <= 3 methods each. - Have implementing classes implement only the specific interfaces they actually fulfill.

**Risks & Trade-offs:** Refactoring interface contracts introduces temporary breaking changes for external callers. Deprecate bloated methods first, provide default adaptor implementations, and migrate client call sites incrementally.

## 7. Methodology & Known Limitations

**Methodology:** InterfaceGuard analyzes Java source code across Git history using JavaParser AST parsing and PyDriller. Metric extraction includes Chidamber & Kemerer (CK) metrics aggregated over implementing classes, interface cohesion metrics, ISP violation heuristics (empty/no-op/exception/placeholder stubs), and NetworkX cycle analysis.

**Limitations:** Dynamic runtime reflection and bytecode manipulation are out of scope. Statistical change-point detection highlights sudden score deteriorations but does not prove intent. All recommendations should be reviewed by engineering teams.
